

Commercial Real Estate Made Beautiful

Altus InSite and Cube Cities Partner to Communication Quality Data with Stunning Visuals

Altus InSite and Cube Cities are partnering to innovate in the presentation and analysis of information for the commercial real estate marketplace. Real estate professionals rely on consistent and timely data to identify opportunities and mitigate risks. Visualizing data in the right location and context is more informative and actionable than when presented in raw or numeric formats.

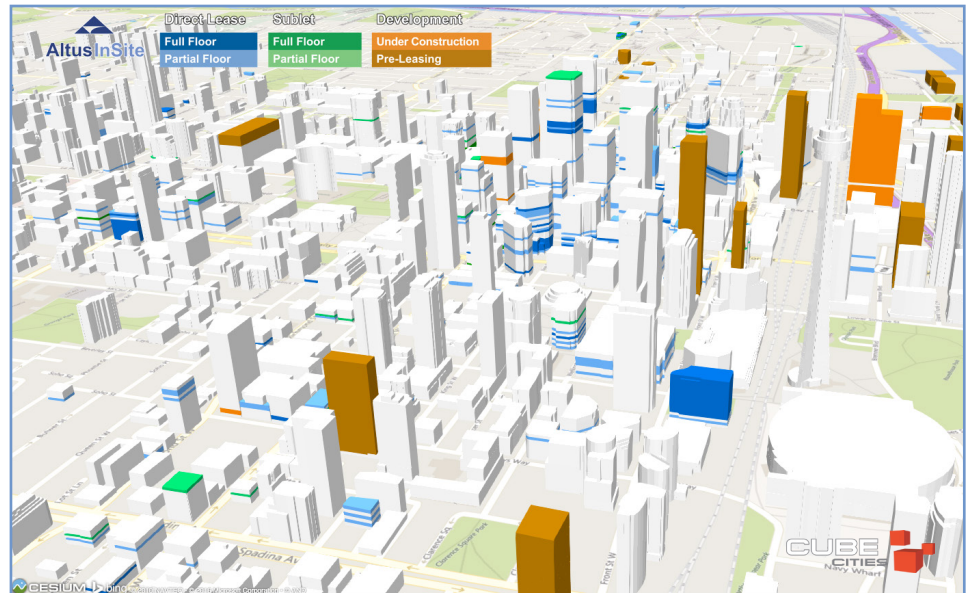

View Statistical Boundaries

View full-colour, static statistical [geography maps](#) showing each of our six major office markets in Canada, as well as maps for each of the districts, and the nodes within each district, for those markets. Maps are also available for the statistical boundaries of our [Toronto Industrial market](#) and district boundaries. More markets to follow.

3D Cube View Snapshots of Inventory and Available Space

Altus InSite and Cube Cities have introduced interactive 3D data visualizations in multiple markets. These visualizations can be experienced on the Altus InSite homepage and showcase the inventory and available spaces for the Downtown districts in each of Vancouver, Calgary, Toronto, Ottawa and Montréal.

Visualize New Supply

New office buildings that are either under construction or in the pre-leasing phase can be added to the visual in order to get a more comprehensive view of the upcoming inventory to be added.

Customized Views

Altus InSite can also provide customized visuals for any users looking to easily showcase their marketshare of inventory and availability/vacancy. For more information, or to set up a demo, please contact info@altusinsite.com.
